Spacy issues

Wednesday, September 12, 2018   11:28 AM

Did the download and link commands work okay, or did you get an error? And does importing the model work for you?

```
import en_core_web_sm
nlp = en_core_web_sm.load()
```

If the above code works, this usually means that the model installed correctly, but the linking to 'en' failed – possibly because you've installed spaCy in a system directory and don't have admin permissions. So try re-running the link command as admin ([see here](#) for more info).
